

Igor Araújo

DevOps Engineer

I started my career as software engineer and decided to change to DevOps to understand, create and design applications with knowledge and both sides. I'm able to help infrastructure and development.

Education

- Software Engineer – Brasília University (UNB) 2015 - 2023
- English as a Second Language - Canadian College 2022

Skills

- **Cloud Platforms:**
 - Amazon Web Services (AWS) - 6 years of extensive experience
 - Google Cloud Platform (GCP) - 4 years of comprehensive expertise
 - Microsoft Azure - Proficient with 1 year of experience
- **Continuous Integration/Continuous Deployment (CI/CD):**
 - Gitlab-CI - 5 years of solid utilization
 - GitHub Actions - Proficient with 3 years of experience
- **Containerization and Orchestration:**
 - Kubernetes - 5 years of hands-on experience
 - Docker - 6 years of in-depth knowledge
 - Terraform - 4 years of robust proficiency
- **Programming Languages and Frameworks:**
 - Python - 6 years of extensive programming expertise
 - Golang (Go) - 4 years of proficient use
 - JavaScript - 3 years of practical experience
 - Node.js - 3 years of active development
 - Bash - 5 years of shell scripting proficiency
- **Machine Learning:**
 - Qdrant - 1 year of active development
 - Ollama - 1 year of proficient use
 - LLMs - 1 year of expertise creating RAG and fine-tuning
 - Runpod - 1 year of active use
- **Operation System:**
 - Linux - 7 years of comprehensive Linux administration
- **Observability and Monitoring:**
 - Prometheus - 3 years of experience with robust monitoring solutions
 - Grafana - 3 years of expertise in creating dashboards
 - Datadog - 3 years of expertise in creating dashboards, alerts and metrics
- **Tools:**
 - Git - 7 years of in-depth version control usage
 - Istio - 2 years of practical use for service mesh management
 - Kafka - 1 year of experience with distributed streaming platforms
- **Databases**
 - MySQL - 4 years of proficiency in managing relational databases
 - MongoDB - 3 years of hands-on usage

Experiences

Turing

September 2025 - present

- Collaborated closely with ML team to support the definitions of tools and services to finetuning LLMs and Rags
- Design and create pipelines to deploy applications on GKE and other services of GCP
- Help the developer team to have a better, stable and easy environment to test new solutions

GoodRx

February 2023 - September 2025

- Enhanced and contributed to the development of a tool for creating ephemeral environments, streamlining the team's workflow for microservices development.
- Designed and implemented a Retrieval-Augmented Generation (RAG) pipeline to ingest, embed, and query document data, enabling accurate, data-driven Q&A capabilities.
- Engineered reproducible ML environments to streamline model fine-tuning experiments, accelerating research and development by eliminating manual configuration.
- Orchestrated distributed fine-tuning across multi-cloud providers, optimizing for high availability and a significant reduction in infrastructure costs.

Cyral (USA) - DevOps Engineer (Full Time)

January 2022 - January 2023

- Spearheaded the conceptualization and construction of cutting-edge tools to elevate developer productivity.
- Leveraged Kubernetes to author YAML configurations and implement solutions with finesse.
- Crafted Infrastructure as Code (IAC) using Terraform, bolstering infrastructure management while enhancing a custom Golang provider via gRPC.
- Provided invaluable assistance to clients in configuring and maintaining infrastructure for Cyral's data management application

IBM - Solution Architect (Full Time)

August 2021 - January 2022

- Orchestrated the design of innovative solutions, adhering to best practices in both development and DevOps domains.
- Demonstrated technical prowess by crafting a Proof of Concept (POC) utilizing cutting-edge technologies such as Kubernetes, Java Spring, Golang, Terraform, and AWS.
- Collaborated closely with clients to comprehend their specific challenges and expertly devised tailored solutions.

Monprospecteur (Canada)- DevOps Engineer (Contract)

May 2020 - August 2021

- Spearheaded a comprehensive infrastructure migration and instilled a culture of transformative change at Monprospecteur.
- Architecturally devised Docker images to facilitate seamless deployment within Kubernetes environments.
- Implemented streamlined CI/CD pipelines employing GitHub Actions.
- Leveraged my development acumen to optimize architecture and promote best practices.

Mcontigo (Spain)- DevOps Engineer (Full Time)

August 2020 - August 2021

- Drove performance enhancements and efficiently managed CI/CD using GitLab-CI.
- Specialized in GitOps, applying Golang scripts to optimize pipelines and Helm charts for diverse environments.
- Lead the service mesh with Istio and established comprehensive observability using Prometheus and Grafana.

Probono- Software Engineer (Full Time)

January 2019 - August 2020

- Engaged in full-stack development, employing React, Node.js, and Python for data scraping.
- Embraced AWS and championed DevOps principles, executing CI/CD with Circle CI, Docker, ECS, and other scalable tools.
